# Why using the AURA interface is easy!

The interface for the Z9/Z11 touch screen terminals has been updated with new software, designed to enhance and improve the user experience. We call it AURA.

Although the AURA interface looks different from the Legacy interface, the differences in support and functionality are minimal, with virtually no changes.

The following actions **remain the same**:

- building a TPN in STEAM
- accessing data in DeNovo
- downloading a terminal
- terminal menus
- same host platform certifications
- access the Favorites menu by tapping STAR icon The second s
- access Call Me by tapping CALL icon

#### The following actions are different:

- smart device-type look with a sleeker, more modern layout
- icon-led transaction flow -
- access the Core menu by tapping on the MENU icon
- in STEAM, an AURA software model can be identified by having 'AURA' in the name eg. V3AURACoreF w CrDb\_20200915
