Dejavoo Implements Cost-Saving L2 and L3 Autofill Data Feature.

L2 and L3 processing provide significant cost savings for merchants by lowering interchange rates.

Dejavoo is pleased to announce the implementation of L2 and L3 auto-filling data enrichment across all transactions performed on Dejavoo payment terminals powered by our iPOSpays Gateway. This initiative aims to benefit merchants by lowering the interchange costs associated with each transaction.

How the Auto-Filling feature works

Many merchants don't know how to reduce interchange processing fees and end up paying much more than they should. Dejavoo's intelligent auto-filling feature is automatic, allowing merchants to qualify for discounted interchange rates without cumbersome manual data entry. Auto-filing is an Omni-commerce feature, covering all card-present transactions completed on stand-alone iPOSpays gateway-powered Dejavoo terminals. This feature works across all channels including e-commerce, itemized billing, send payment links, and virtual terminal transactions.

Significant Cost Savings ISOs and Merchants.

ISO and merchants can save up to 80 basis points in interchange cost with Dejavoo's auto-filling feature. If you have B2B and B2G merchants, auto dealers, and restaurants in your portfolio about 20% of their transactions will qualify for significant cost savings.
