

Dejavoo, an iPOS Systems company, announces its partnership with Paya ACH.

[Paya ACH](#) is now available on Dejavoo's payment gateway, iPOSPays. Merchants can now process ACH and check transactions for all customer-not-present payments, including Dejavoo's virtual terminal, send payment link option, and hosted payment page.

**Chris Brundage, VP of Paya ACH, says this integration demonstrates the success of the long partnership between Paya and Dejavoo.** "ACH continues to be a preferred form of payment for consumers and businesses. Dejavoo's Cloud-based gateway ensures that partners and their merchants can fully support ACH in multiple environments with robust features".

**Mony Zenou, Founder and CEO of Dejavoo, an iPOS Systems company, spoke of the importance of this integration.** "By introducing Paya ACH on our gateway as a viable payment option across eCommerce, MOTO, and send payment link transactions, merchants can now offer a fully compliant dual pricing model that empowers their customers."

In addition, this integration with Paya provides secure authentication of account holders using the last 4 digits of their SSN, driver's license number, issuing state, and address. This innovation grants merchants peace of mind, as they no longer need to worry about fraud when collecting ACH payments.
